

1、在main.js中全局引入

```
index.vue | main.js x
2 import MpvueRouterPatch from 'mpvue-router-patch'
3 import App from './App'
4 import store from './store/index'
5 import { logger, date, cache, cacheKey, validate, widget, post, get, apis, util } from './utils/index'
6 import './assets/iconfont/iconfont.css'
7 import './assets/sass/sass_index.scss'
8
9 import MpvueRouterPatchInterceptor from '@/utils/mpvue_router_patch_interceptor'
10 import { every, match } from '@/utils/router_interceptor'
11 import mta from 'mta-wechat-analysis'
12 // 全局引入截屏组件
13 import captureScreen from '@/components/capture_screen'
14 Vue.component('captureScreen', captureScreen)
15
16 Vue.config.productionTip = false
17 Vue.use(MpvueRouterPatch)
18 Vue.use(MpvueRouterPatchInterceptor, { every, match })
19 App.mpType = 'app'
20 Vue.prototype.$store = store
21
22 // 打印日志console.log, 发布环境会过滤
23 Vue.prototype.$log = logger.log
24 // 日期util, 可以自己往里面添方法
25 Vue.prototype.$date = date
26 // wx缓存
27 Vue.prototype.$cache = cache
28 // 缓存的key, 最好key列表管理起来, 搭配cache使用
29 Vue.prototype.$cacheKey = cacheKey
30 // 一些验证的方法, 没有的自己往里面加
31 Vue.prototype.$validate = validate
32 // wx弹出框, toast, toastSuccess, alert, confirm, 别的也可以往里面加
```

2、用到的页面中引入

```
index.vue ...hospital | main.js | index.vue ...home x
1 <template>
2 <div :class="['home', {'scroll-hidden' : showRegion}]">
3 <div style="height: 80rpx">
4 <section class="fixed top0 left0 right0 paddingX28 bgcolor-white flex-align-spacebetween" style="width: 100%; height: 100%;">
5 <div class="flex-align" style="width: 200rpx" @tap="showRegion = !showRegion">
6 <i class="itemflex-00auto icon-location color-theme font-size10"></i>
7 <div class="margin-left14 line-ellipsis color-333">{{locateRegion}}</div>
8 <i class="itemflex-00auto margin-left10 icon-enter font-size-4"></i>
9 </div>
10 <div class="flex-align" @click="pushView('/pages/personal/help_feedback_manage', true)">
11 <i class="margin-right12 icon-feedback color-theme" style="font-size: 48rpx"></i>反馈
12 </div>
13 </section>
14 <section class="fixed top0 left0 right0" style="z-index: 101">
15 <captureScreen /></captureScreen>
16 </section>
17 </div>
18 <section class="banner-wrap" @click="showBannerDetail">
19 <image :src="imgBanner" class="width100 height100" mode="aspectFill"></image>
20 </section>
21 <section v-if="switchCheck" style="height: 304rpx">
22 <ul class="mainmodule-wrap">
23 <li class="padding20X flex-spacebetween" @click="pushView('/pages/ask_medicine', true)">
24 <div class="flex">
25 <i class="itemflex-00auto theicon-askmedicine"></i>
26 <div class="margin-left18 margin-top8">
27 <p class="font-size8 bold color-333">即时问诊</p>
```

3、由于这个分享的事件写在子组件中会报错, 所以要单独在父组件里调用

```
index.vue ...hospital main.js index.vue ...home x
175 // this.$cache.set(this.$cacheKey.locateRegion, city)
176 this.getRegionModule(this.locateRegion)
177 })
178 // })
179 } else {
180 this.getRegionModule(this.locateRegion)
181 }
182 })
183 this.getRegionList()
184 },
185 onShow () {
186 getConfig()
187 getunreadNum()
188 if (this.$store.state.userInfo) {
189 this.countBuyAsk()
190 }
191 },
192 onShareAppMessage: (res) => {
193 this.a.components.captureScreen.methods.share()
194 },
195 methods: {
196 // 获取问诊次数和购药次数
197 countBuyAsk () {
198 this.$post({
199 url: this.$apis.countBuyMedicineAndInquiry
200 }).then(res => {
201 this.frequencyBuyMedicine = res.data.frequencyBuyMedicine
202 this.frequencyInquiry = res.data.frequencyInquiry
203 })
204 },
```

4、组件中的share方法

```
e
帮助(H)
index.vue main.js capture_screen.vue x
43 wx.onUserCaptureScreen((res) => {
44 console.log('截屏事件触发')
45 this.showCaptureScreen = true
46 this.timer = setTimeout(() => { this.showCaptureScreen = false }, 5000)
47 })
48 },
49 hideCaptureScreen () {
50 this.showCaptureScreen = false
51 },
52 share: (res) => {
53 clearTimeout(this.timer)
54 this.showCaptureScreen = false
55 console.log('分享')
56 return {
57 title: '橄榄云',
58 path: '/' + getCurrentPages().pop().route,
59 // imageUrl: '/images/1.jpg',
60 success: (res) => {
61 console.log('转发成功', res)
62 },
63 fail: (res) => {
64 console.log('转发失败', res)
65 }
66 }
67 }
68 }
69 }
70 </script>
71 <style lang="scss" scoped>
72 .capture_screen{
```
